Complete capability inventory

Reference version: 1.0.24

Publisher: Daniel Partel

Website: https://sirius-assistant.fr

How to read this guide

- LOCAL: works inside the Windows application with data stored on the computer.
- CONFIGURABLE: requires an API key, account, OAuth consent or user-provided URL.
- OPTIONAL: depends on an external service or available hardware.
- PREPARATION: an interface or engine exists, but the full integration still needs completion.
- LIMIT: does not replace certification, professional advice or human decisions.

1. ΣIRIUS core

ΣIRIUS is a Windows and web application built from a React interface, a Python/FastAPI backend and a configurable conversational engine.

It can:

- answer in French by text;
- receive French voice commands;
- use French speech synthesis;
- run as an installed or portable Windows application;
- start its local backend automatically;
- use local SQLite storage when MongoDB is unavailable;
- display service status, memory, network and CPU/RAM information;
- run in normal, frugal and emergency modes;
- show task progress and an operation journal;
- receive automatic updates from GitHub Releases;
- run as a PWA and be prepared for Android/iOS through Capacitor.

Status: LOCAL for the application and backend; CONFIGURABLE for AI and external services.

2. HUD and user experience

The ΣIRIUS HUD provides:

- animated central reactor;
- listening, thinking and speaking states;
- voice waveform visualization;
- clock, date, weather and CPU/RAM panels;
- command palette navigation;
- draggable and resizable work windows;

© 2026 Daniel Partel – ΣIRIUS Assistant. Tous droits réservés.

- keyboard shortcuts and voice commands;
- full-screen mode;
- Electron overlay mode with a global shortcut;
- startup presentation and voice sequence;
- 3D holographic hands and visual cortex;
- web and media windows;
- responsive mobile navigation;
- reduced-motion support.

The HUD is ΣIRIUS's visual signature. Business screens remain separate and focus on readable forms, tables, search, filters and printing.

3. Voice and conversation

ΣIRIUS can:

- listen through browser speech recognition;
- use Space as a push-to-talk key;
- convert speech into structured intents;
- correct frequent phonetic recognition errors;
- interrupt spoken responses with a new command;
- limit echo and false triggers;
- speak with a browser voice or configured TTS service;
- adjust speech rate and voice settings;
- read long answers on request;
- open modules by voice;
- launch media, notes, tasks, documents and searches by voice;
- provide visual feedback while listening and responding.

Limit: voice recognition depends on browser, microphone and Windows permissions.

4. AI and reliable answers

The AI engine can:

- answer in French;
- detect commands and user intents;
- search the web when a search key is configured;
- summarize briefings and documents;
- produce structured answers;
- generate architecture diagrams;
- suggest corrective actions;
- review code without executing it;
- generate plans from natural-language descriptions;

© 2026 Daniel Partel – ΣIRIUS Assistant. Tous droits réservés.

- use a brainstorming mode;
- preserve conversation context;
- expose network and service errors instead of silently hiding failures.

Professional rule: health, accounting, legal, financial, regulatory and safety decisions must be checked by a qualified human.

5. Memory and local learning

The memory system provides:

- personal memories saved on request or automatically;
- an editable “What ΣIRIUS knows about me” panel;
- dated long-term memory;
- preference, project and memory categories;
- local SQLite memory;
- keyword search;
- offline multilingual semantic recall with local embeddings;
- event and habit journaling;
- confidence score and daily suggestions;
- memory editing and deletion;
- memory export and backup;
- user-level or company-level data isolation when authentication is active.

6. ΣIRIUS Enterprise

The Enterprise module provides:

- company workspace creation;
- multiple establishments with name, address and active status;
- team members;
- administrator, manager, operator and viewer roles;
- module permissions for HACCP, documents, audit, sites, members, backups, THÉMIS and integrations;
- adding an existing account by e-mail;
- controlled role changes;
- owner administrator protection;
- dashboard counts for members, sites, documents, audits and open non-conformities;
- license and support status;
- global search across members and audit events;
- audit action filters;
- printable audit journal;
- mobile-friendly layout;
- company-scoped workflows and backups.

Online billing and automatic subscription management still require a payment provider integration before they can be considered operational.

7. Accounts, security and GDPR

ΣIRIUS provides:

- e-mail/password accounts;
- local-machine session protection;
- signed access tokens;
- HttpOnly, Secure and SameSite Strict cookies;
- session refresh;
- login-attempt throttling;
- password reset by configured e-mail service;
- bcrypt password hashing;
- MFA/TOTP with QR code;
- encrypted MFA secret storage;
- MFA code required after activation;
- unique user indexes and legacy index migration;
- module permissions;
- user and company data isolation;
- GDPR personal-data export as a ZIP archive;
- confirmed account deletion;
- protection against deleting the main administrator account;
- audit logging for sensitive actions;
- safe upload types and paths;
- upload size limits;
- tracked-secret detection during release audits.

For professional deployment, also use Windows account protection, disk encryption, encrypted backups, retention rules and a legal GDPR review.

8. HACCP and food safety

The HACCP module manages:

- receipt and traceability records;
- product, lot, supplier, quantity and use-by date;
- receiving temperature;
- positive-cold, freezer and hot-holding equipment;
- temperature readings with thresholds;
- non-compliant reading detection;
- temperature history;
- the food safety management plan;

© 2026 Daniel Partel – ΣIRIUS Assistant. Tous droits réservés.

- PMS procedure statuses;
- non-conformities;
- minor, major and critical severity;
- anomaly descriptions;
- corrective actions;
- confirmed non-conformity closure;
- cleaning and disinfection plans;
- zones, products, frequencies and responsible staff;
- cleaning task validation;
- the 14 EU allergens reference list;
- dish-level allergen sheets;
- mandatory-document register;
- issue and expiry dates;
- persistent control sheets;
- voice dictation for control sheets;
- compliant, non-compliant or not-applicable results;
- human validation with identity and date;
- control history;
- blank printable HACCP forms;
- pre-filled HACCP forms;
- printable product labels;
- audit PDF with period, sources, controls and validation status;
- HACCP backup and restore;
- HACCP permissions;
- audit events for creations, validations and reports.

Limit: the report is an internal preparation and traceability tool, not an official certification.

9. THÉMIS: business, sales and finance

THÉMIS can manage:

- customer records;
- quotes and invoices;
- invoice lines, quantities and unit prices;
- net, VAT and gross totals;
- document numbering;
- draft, sent, accepted, paid and refused statuses;
- due dates;
- payments and payment methods;
- customer reminders;

© 2026 Daniel Partel – ΣIRIUS Assistant. Tous droits réservés.

- orders and order statuses;
- document templates;
- antique, modern and minimal templates;
- PDF generation;
- e-mail delivery when SMTP is configured;
- supplier documents in PDF, PNG, JPG and WEBP;
- OCR/AI extraction from supplier documents;
- accounting journal;
- VAT summary;
- bank reconciliation;
- cash-flow forecast;
- accounting and CSV exports;
- stock items;
- references, prices, initial stock and alert thresholds;
- low-stock alerts;
- stock entries and exits;
- movement reasons;
- before/after quantities;
- per-item movement history.

Limit: THÉMIS is a monitoring and management tool; it is not certified legal accounting software and does not replace an accountant.

10. CRM and sales

The commercial tools include:

- contacts and address book;
- clients and companies;
- HERMÈS AGORA sales pipeline;
- prospects and opportunities;
- sales stages;
- amounts and commission preparation;
- sales objectives;
- objection coaching;
- interaction history;
- reminders;
- conversion of won deals into THÉMIS quotes or invoices;
- commercial exports;
- audit logging of key actions.

© 2026 Daniel Partel – ΣIRIUS Assistant. Tous droits réservés.

11. Productivity and project work

Productivity tools provide:

- notes and SmartNotes;
- tasks and TaskMaster;
- deadlines;
- task states;
- live task windows;
- long-operation progress tracking;
- reports and ReportBuilder;
- local document analysis;
- code analysis;
- Dev Companion review;
- project memory;
- architecture diagrams;
- spectator/casting view for diagrams.

Preparation: complete Gantt charts, detailed time tracking, workload allocation and project budgets still require a dedicated module.

12. Documents, media and storage

ΣIRIUS provides:

- file and media library;
- upload, list, download and logical deletion;
- images, audio, PDF, text, CSV and XLSX support depending on route;
- document analysis;
- inline audio playback;
- image thumbnails;
- Enterprise document vault;
- local Windows storage;
- local fallback when external storage is not configured;
- company metadata and file backups;
- path and type validation;
- file-size limits;
- PDF, CSV and XLSX exports depending on module;
- DXF and SVG exports from PLANS#;
- direct printing of business forms.

Preparation: external cloud synchronization such as NAS, OneDrive, Google Drive or S3 can be connected according to business needs.

13. Outlook, Gmail, calendar and contacts

Microsoft 365

With Microsoft OAuth configured, and depending on granted scopes, ΣIRIUS can provide:

- Outlook mailbox access;
- e-mail search and reading;
- important-message briefing;
- e-mail sending after confirmation;
- protected sensitive actions;
- Microsoft calendar events;
- today's schedule;
- event creation or editing where scopes allow it;
- Outlook contacts;
- contact folders;
- token refresh;
- reconnection when authorization expires.

Google

With Google OAuth configured, the authorized services can provide:

- Google Calendar;
- event creation and reading;
- agenda reminders;
- Gmail access where scopes allow it;
- message reading for briefings and authorized workflows.

ΣIRIUS never asks for Google or Microsoft passwords.

14. Home Assistant and equipment

KERAUNOS# can provide, with a Home Assistant URL and token:

- REST connection to Home Assistant;
- entity-state reading;
- voice commands;
- authorized device control;
- clear service-unavailable errors;
- locally managed connection settings.

Professional equipment support depends on its API or Home Assistant compatibility.

15. PLANS# and geometry

PLANS# can:

© 2026 Daniel Partel – ΣIRIUS Assistant. Tous droits réservés.

- turn a natural-language description into a plan;
- create rooms and surfaces;
- calculate areas and perimeters;
- display a 2D color view;
- display an isometric 3D view;
- calculate dimensions and measurements;
- export DXF;
- export SVG;
- open output in AutoCAD, LibreCAD or QCAD;
- accept commands such as “draw a 6 by 4 metre garage”.

16. Vision, OCR and media

ΣIRIUS can provide:

- camera capture;
- Electron screen capture;
- OCR and screen summarization with configured vision AI;
- image analysis;
- 3D holographic hands;
- visual cortex;
- MYTHOS gallery;
- Europeana archives;
- country sheets;
- news;
- documentaries;
- weather;
- Spotify now-playing information;
- YouTube, Twitch, TikTok and Deezer through official players;
- WebSocket media-window synchronization;
- TRAILER# cinematic shots;
- PACKAGER# multi-platform deliverables.

17. Supervision and maintenance

PANTHEON SYSTEM, NEXUS, ARGUS and HÉPHAÏSTOS provide:

- process supervision;
- CPU/RAM monitoring;
- network status;
- connectivity checks;
- service history;

© 2026 Daniel Partel – ΣIRIUS Assistant. Tous droits réservés.

- local diagnostics;
- module checks;
- proactive monitoring;
- normal, frugal and emergency modes;
- protected maintenance actions;
- self-repair controls;
- local backups with manifest and SHA-256;
- integrity verification;
- Enterprise restore;
- sensitive-operation logging.

18. ORACLE DIVIN and ΣIRIUS PRIME

ORACLE DIVIN can display:

- morning briefing;
- multi-day weather;
- cryptocurrency prices where APIs are available;
- market trends;
- news and estimated impact;
- moon phase and astronomy information;
- personal predictions based on recorded habits.

ΣIRIUS PRIME can display:

- learning journal;
- habits by hour and day;
- frequent intents;
- confidence score;
- daily suggestions;
- memory management.

Limit: predictions and estimates are not financial or scientific guarantees.

19. Installer, updates and quality

The project provides:

- Windows NSIS installer;
- Windows portable build;
- installer license display;
- automatic local backend startup;
- desktop and Start Menu shortcuts;
- controlled data retention on uninstall;

© 2026 Daniel Partel – ΣIRIUS Assistant. Tous droits réservés.

- Electron automatic updates;
- differential-update blockmap;
- GitHub Releases;
- secret audit;
- backend and frontend tests;
- restore tests;
- security tests;
- GitHub bug template;
- Enterprise and support documentation;
- embedded-frontend verification;
- version-regression checks.

20. Limits and responsibility

ΣIRIUS is an assistant and business-tools platform. It is not:

- a certified accountant;
- a lawyer;
- certified payroll software;
- an official HACCP certification;
- a medical device;
- a safety authority;
- a qualified electronic signature;
- a guarantee of financial or commercial results;
- a replacement for human validation.

Critical data must be checked, backed up and validated by a qualified person. External integrations have their own accounts, permissions, keys and terms of service.
